

Hands-On Workshop in Electron Beam Irradiation Technologies

I participated in the 2016 Hands-On Electron Beam Technology Workshop from April 17th to 22nd, 2016. This workshop was held at the Texas A&M University campus in College Station, Texas, USA. The workshop courses covered the working principles of e-Beam technology, dosimetry and different applications of e-Beam. It also discussed current global trends in the use of e-Beam technology.

The workshop included both presentations as well as actual hands-on laboratory exercises as it relates to dosimetry, The workshop courses taught me lot about a variety of different applications of e-Beam, including food quality, food safety, environmental remediation, and materials transformation.

The host provided us with a variety of full services, helping us access the facilities very smoothly.
