

## Hands-On Workshop in Electron Beam Irradiation Technologies

It was my honor to attend the eBeam workshop in 2016.

The workshop discussed how eBeam technology is being used for food safety, environmental remediation, materials transformation, etc. The unique aspects of this workshop is that representatives from all the leading eBeam technology providers were attendance. This workshop provided an unparalleled amount of networking opportunity.

The presentations covered the working principles of eBeam technology, dosimetry, the different applications, as well as discussing the current global trends in the use of eBeam technology for a variety of other applications. The workshop included both presentations and hands-on laboratory exercises related to dosimetry, single pass / dual pass treatment processes, dose penetration into materials of different densities and microbial inactivation profiles.
