

Hands-On Workshop in Electron Beam Irradiation Technologies

I participated in the 2016 Hands-On Electron Beam Technology Workshop from April 17th to 22nd, 2016. This workshop was held at the Texas A&M University campus in College Station, Texas, USA. The workshop courses covered the working principles of e-Beam technology, dosimetry and different applications of e-Beam. It also discussed current global trends in the use of e-Beam technology.

The hands-on laboratory exercises and the presentations were also helpful. The workshop courses taught me a lot about a variety of different applications of e-Beam. In particular, the workshop taught me more about the e-Beam application on phytosanitation, which would be beneficial for the running of China-Asean Pingxiang Fruit Quarantine Irradiation Center. The workshop host provided us with a variety of full services, helping us access the facilities very smoothly.
